Prediction Market **AI Agent**

Powered by AI Agents and a real-time data engine,
enabling 24/7 prediction market trading capabilities
and transforming them into automated profit generation.

www.iorca.xyz

What is Orca?

Understanding the evolution of the market.

2013 - 2017

Cross-Platform Arbitrage Era

Disappeared after platform rules became stricter.

Sam Bankman-Fried, Changpeng Zhao, independent arbitrage groups, and early quantitative traders began dominating the market.

2020 - 2022

Quantitative Trading Era

Over quadrillions in trading volume, excess returns have gradually compressed.

Millions of bots trading simultaneously, market efficiency increased rapidly, traditional arbitrage opportunities became increasingly compressed.

2026 - Future

Prediction Market Era

The battlefield of opportunity has changed, but the essence remains the same.

The market has evolved from "price competition" to "information competition."

AI no longer analyzes only candlestick charts, it now analyzes: emotions, events, probabilities, and cognitive gaps.

If you want to go back to Bitcoin arbitrage, it's no longer possible. But in the emerging prediction market arbitrage space, the competition is about "whose AI executes better."

AI Agent Opportunity in Prediction Market

Prediction markets have evolved into a multi-billion dollar industry — yet they remain structurally fragmented. Platforms like Polymarket and Kalshi operate independently, with separate liquidity pools, different user bases, and no price synchronisation mechanism.

"Will Trump create a National Bitcoin Reserve in 2025?"

Polymarket: YES = 51¢

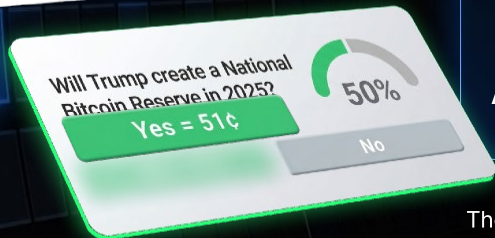

Kalshi: NO = 31¢

Combined YES + NO across platforms = \$0.82

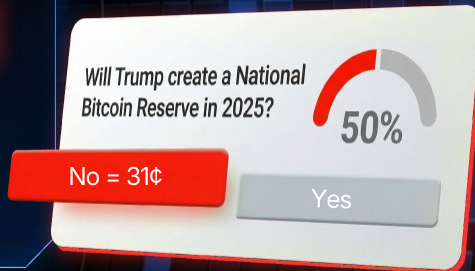

Arbitrage profit: ~\$0.18 per \$1 deployed = ~18% return

The gap is real. The opportunity exists. But without AI-powered automation, 99% of people will never capture it.

Orca was built to change that.

Kalshi

Why Choose Prediction Markets?

Prediction markets are not traditional finance. Instead, they are real-time information markets formed by global users and real capital.

Decentralized

Extremely Broad Market

Very Few Competitors

Massive Information Arbitrage Opportunities

"Because of the information gap. This is exactly why now is the best time — prediction markets are replaying the early opportunities of 2013 Crypto."

- Event Attention and Trading Volume
- Nodepay Grassroots Information

NODEPAY Data Foundation

Strategy Selection [How to Arbitrage]

- Spatial Arbitrage
- Hedging Arbitrage
- Triangular Arbitrage
- Quantitative Arbitrage

AI Automated Execution

- Capital Ratio Calculation
- Capital Allocation
- Place Orders When Conditions Are Met
- Self-Assessment and Verification

ORCA AI AGENT
Strategy Technology

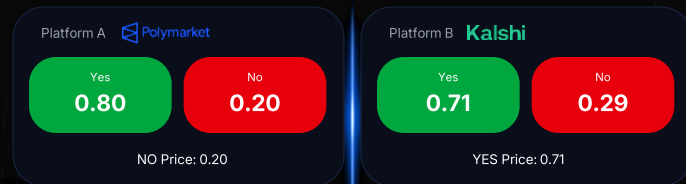

"Data itself does not create value. Only when AI can understand it and execute it can it form a true closed-loop profit capability."

Prediction Market · Arbitrage Strategy — Practical Logic Demonstration

> Arbitrage Example

When the combined prices of the same event across two platforms are less than 1 at the same time, an arbitrage opportunity exists.

Position Allocation Example — using a total cost of 0.91 and USD 10,000 as an example:

$$\text{Total: NO } 0.20 + \text{YES } 0.71 = 0.91 (<1)$$

Buy in with \$2,200
Bet on NO

Buy in with \$7,800
Bet on YES

Platform A Polymarket

$$(0.20 / 0.91) * \$10,000 = \$2,200$$

Number of shares held $\$2,200 / 0.20$
= 11,000 shares

Platform B Kalshi

$$(0.71 / 0.91) * \$10,000 = \$7,800$$

Number of shares held $\$7,800 / 0.71$
= 10,985 shares

Event settlement: each share held is settled at USD 1 per share.

Profit Calculation

Total Investment: \$10,000
(\$2,200 + \$7,800)

Expected Profit: 9.8% ~ 10%
(\$985 - \$1,000)

✗ Event Does Not Occur (No Wins)
Platform A: \$11,000 Return
Platform B: \$0 Return
Total Profit: \$1,000 (\$11,000 - \$2,200 - \$7,800)

✓ Event Occurs (Yes Wins)
Platform A: \$0 Return
Platform B: \$10,985 Return
Total Profit: \$985 (\$10,985 - \$2,200 - \$7,800)

By utilizing price differences across different platforms for hedging arbitrage, profits can be locked in regardless of the outcome.

EDEN ONCHAIN AGENT

Daily Return: 0.2%~0.3% / Day
Period: 10 Days
Check-in Bonus: Extra 50%
Est. 0.30% ~ 0.45%/ Day

A zero-barrier entry point into AI-powered prediction market trading. Eden deploys simplified Cross-Platform Arbitrage logic across Polymarket and Kalshi, executing basic spread captures on the highest-confidence opportunities only. Built as a discovery package — experience how the Orca engine identifies, validates, and executes real arbitrage in real time. No prior knowledge required. Start small, see results, then scale.

ORACLE ONCHAIN AGENT

Daily Return: 0.3%~0.4% / Day
Period: 90 Days
Check-in Bonus: Extra 50%
Est. 0.45% ~ 0.60%/ Day

Designed for short cycles, fast feedback, and immediate market exposure. It deploys Cross-Platform Arbitrage logic across Polymarket and Kalshi, scanning for guaranteed spreads and executing trades before the window closes. Ideal for those who want to experience the AI Agent era firsthand with a low-commitment, high-frequency starting position.

AXIOM ONCHAIN AGENT

Daily Return: 0.4%~0.5% / Day
Period: 180 Days
Check-in Bonus: Extra 75%
Est. 0.70% ~ 0.875%/ Day

Designed for operates on a medium-term intelligence cycle, combining Sentiment & Momentum trading with Spike Detection to capture a wider range of market opportunities across multiple event categories. The agent builds pattern recognition across market cycles — improving signal accuracy and compounding returns as it accumulates more trading history. Built for participants who are ready to let AI work consistently on their behalf.

APEX ONCHAIN AGENT

Daily Return: 0.45%~0.6% / Day
Period: 360 Days
Check-in Bonus: Extra 100%
Est. 0.90% ~ 1.20%/ Day

A full-spectrum AI trading agent running Price Divergence, Arbitrage, and Momentum strategies simultaneously across a sustained period horizon. With access to deep compounding cycles and cross-signal fusion logic, APEX is engineered to maximise capital efficiency over time — turning patience and conviction into measurable, compounding returns. For those who understand that the greatest edge belongs to those who stay in the market longest.

Feature Highlights

- 
Tiered Growth
 A clear ranking system designed to encourage sustainable growth, with earnings progressively increasing at each stage.
- 
Strong Earning Potential
 Direct, transparent, and attractive daily / weekly / monthly earning expectations with long-term value potential.
- 
Community-Driven
 Grow together with the community and share in ecosystem expansion benefits.
- 
Transparent & Fair
 Rules are openly structured, with automated reward distribution for secure and reliable operations.
